

Question 1

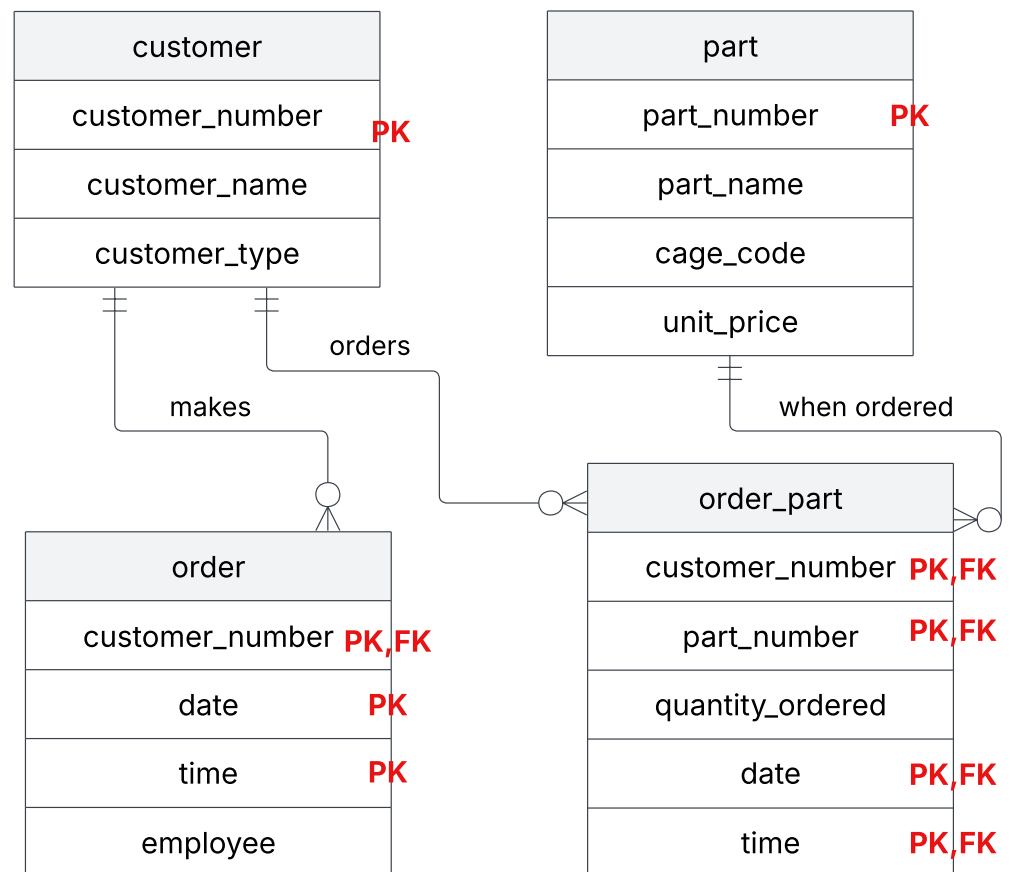

Assumptions:

1. Assume Customer Number uniquely identifies a customer
2. Assume Part Number uniquely identifies a part
3. Assume Customer Number, along with Date and Time, uniquely identify an order
4. Assume each order is made by one customer
5. Assume each part has one Part Name, Part Type, Cage Code, and Unit Price
6. Assume Quantity Ordered depends on the specific Order and Part
7. Assume an order can contain multiple different parts
8. Assume a part can appear on multiple different orders

1NF

order_form
customer_number PK
customer_name
customer_type
date PK
time PK
employee
part_number PK
part_name
part_type
cage_code
quantity_ordered
unit_price

2NF/3NF

Question 2

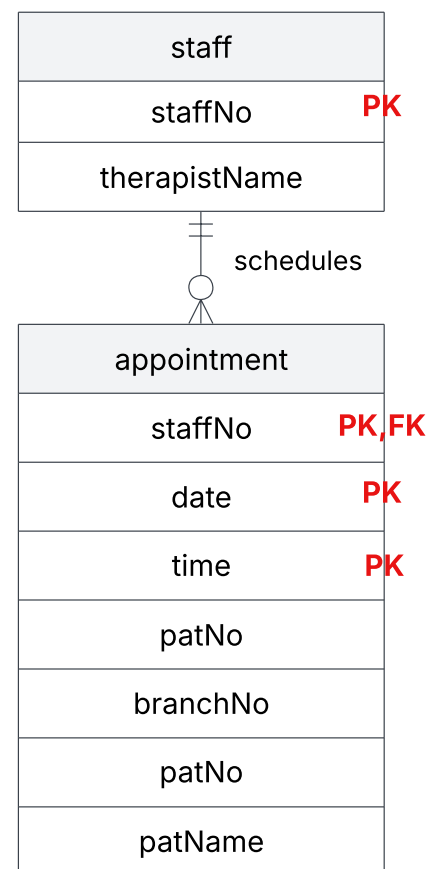

Assumptions:

1. Assume StaffNo uniquely identifies a therapist
2. Assume PatNo uniquely identifies a patient
3. Assume StaffNo, along with Date and Time, uniquely identify an appointment
4. Assume each appointment is with one patient and one therapist
5. Assume a therapist works at only one branch on a given day
6. Assume BranchNo identifies the branch where the appointment takes place

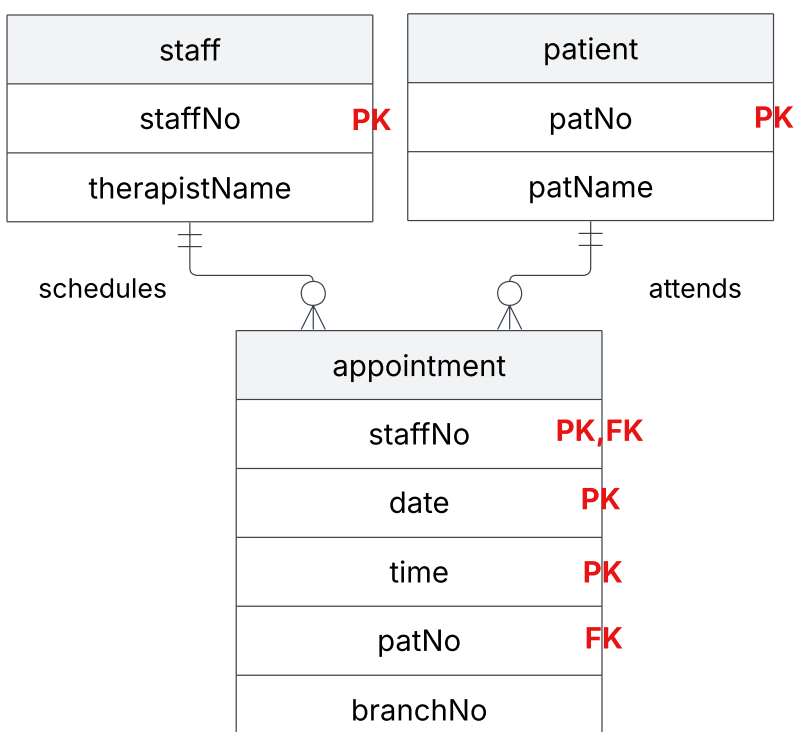

1NF

appointment	
staffNo	PK
date	PK
time	PK
patNo	Candidate Key (Instead of StaffNo)
branchNo	
patName	
therapistName	

2NF

3NF

Question 3

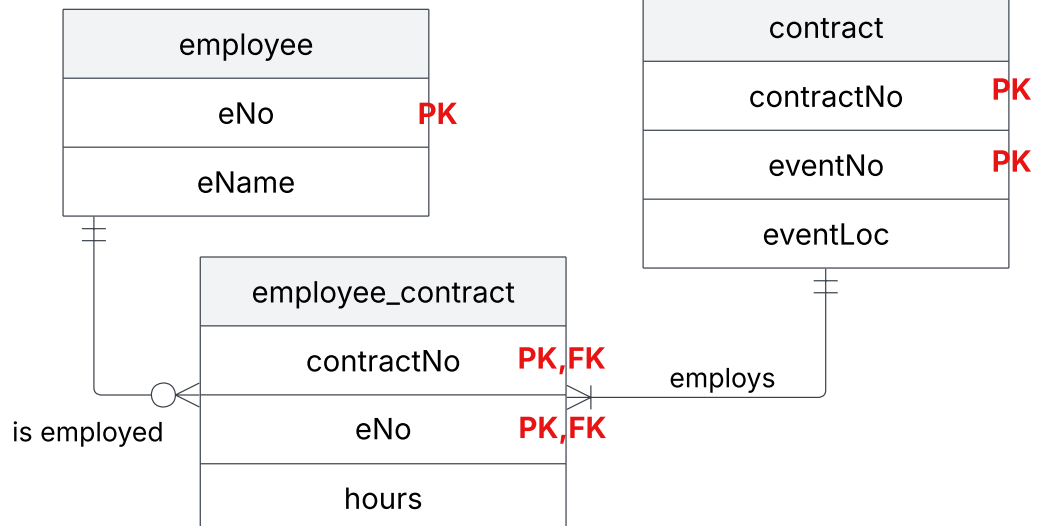

Assumptions:

1. Assume eNo uniquely identifies staff
2. Assume contractNo uniquely identifies a contract
3. Assume eventNo uniquely identifies an event
4. Assume contractNo identifies the event that the contract applies to
5. Assume eventNo identifies the event location
6. Assume eNo, along with contractNo, identify the hours worked by a staff member

1NF

contract
eNo PK
contractNo PK
eventNo
hours
eName
eventLoc

2NF

3NF
